

Contents

Part 1. A Quick Tour	1
Chapter 1. Plane Curves	3
1.1. Conics	3
1.2. Singularities	4
1.3. Bezout's theorem	6
1.4. Cubics	7
1.5. Quartics	9
1.6. Hyperelliptic curves	11
Part 2. Sheaves and Geometry	15
Chapter 2. Manifolds and Varieties via Sheaves	17
2.1. Sheaves of functions	17
2.2. Manifolds	19
2.3. Algebraic varieties	22
2.4. Stalks and tangent spaces	26
2.5. Singular points	29
2.6. Vector fields and bundles	30
2.7. Compact complex manifolds and varieties	33
Chapter 3. Basic Sheaf Theory	37
3.1. The Category of Sheaves	37
3.2. Exact Sequences	39
3.3. Direct and Inverse images	42
3.4. The notion of a scheme	43
3.5. Gluing schemes	46
3.6. Sheaves of Modules	49
3.7. Differentials	53
Chapter 4. Sheaf Cohomology	55
4.1. Flasque Sheaves	55
4.2. Cohomology	57
4.3. Soft sheaves	60
4.4. C^∞ -modules are soft	62
4.5. Mayer-Vietoris sequence	63
Chapter 5. De Rham cohomology of Manifolds	67
5.1. Acyclic Resolutions	67
5.2. De Rham's theorem	69
5.3. Poincaré duality	71

5.4. Gysin maps	74
5.5. Fundamental class	76
5.6. Lefschetz trace formula	78
Chapter 6. Riemann Surfaces	81
6.1. Topological Classification	81
6.2. Examples	83
6.3. The $\bar{\partial}$ -Poincaré lemma	86
6.4. $\bar{\partial}$ -cohomology	87
6.5. Automorphisms	89
6.6. Projective embeddings	90
6.7. Automorphic forms	93
Chapter 7. Simplicial Methods	97
7.1. Simplicial and Singular Cohomology	97
7.2. $H^*(\mathbb{P}^n, \mathbb{Z})$	101
7.3. Čech cohomology	102
7.4. Čech versus sheaf cohomology	105
7.5. First Chern class	106
Part 3. Hodge Theory	111
Chapter 8. The Hodge theorem for Riemannian manifolds	113
8.1. Hodge theory on a simplicial complex	113
8.2. Harmonic forms	114
8.3. The Heat Equation	117
Chapter 9. Toward Hodge theory for Complex Manifolds	121
9.1. Riemann Surfaces Revisited	121
9.2. Dolbeault's theorem	122
9.3. Complex Tori	124
Chapter 10. Kähler manifolds	127
10.1. Kähler metrics	127
10.2. The Hodge decomposition	129
10.3. Picard groups	131
Chapter 11. Homological methods in Hodge theory	133
11.1. Pure Hodge structures	133
11.2. Canonical Hodge Decomposition	134
11.3. Hodge decomposition for Moishezon manifolds	138
11.4. Hypercohomology	139
11.5. Holomorphic de Rham complex	141
11.6. The Deligne-Hodge decomposition	142
Chapter 12. A little algebraic surface theory	145
12.1. Examples	145
12.2. The Neron-Severi group	148
12.3. The Hodge index theorem	150
12.4. Fibred surfaces	151

Chapter 13. Topology of families	153
13.1. Fibre bundles	153
13.2. Monodromy of families of elliptic curves	153
13.3. Local systems	157
13.4. Higher direct images	158
13.5. Estimate of first Betti number	160
Chapter 14. The Hard Lefschetz Theorem	163
14.1. Hard Lefschetz and its consequences	163
14.2. More identities	164
14.3. Lefschetz pencils*	166
14.4. Barth's theorem*	170
14.5. Degeneration of Leray*	171
14.6. Higher Chern classes	172
Part 4. Coherent Cohomology	175
Chapter 15. Coherent sheaves on Projective Space	177
15.1. Cohomology of line bundles on \mathbb{P}^n	177
15.2. Coherence	179
15.3. Coherent Sheaves on \mathbb{P}^n	181
15.4. Cohomology of coherent sheaves	184
15.5. GAGA	186
Chapter 16. Computation of some Hodge numbers	191
16.1. Hodge numbers of \mathbb{P}^n	191
16.2. Hodge numbers of a hypersurface	193
16.3. Hodge numbers of a hypersurface II	195
16.4. Double covers	197
16.5. Griffiths Residues	198
Chapter 17. Deformation invariance of Hodge numbers	201
17.1. Families of varieties via schemes	201
17.2. Semicontinuity of coherent cohomology	203
17.3. Proof of the semicontinuity theorem	205
17.4. Deformation invariance of Hodge numbers	207
Part 5. A Glimpse Beyond	209
Chapter 18. Analogies and Conjectures	211
18.1. Counting points and Euler characteristics	211
18.2. The Weil conjectures	212
18.3. A transcendental analogue of Weil's conjecture	215
18.4. Conjectures of Grothendieck and Hodge	216
18.5. Problem of Computability	219
Bibliography	221
Index	225
