Part 1. Sheaves and Geometry	1
Chapter 1. Manifolds and Varieties via Sheaves	3
1.1. Sheaves of functions	3
1.2. Manifolds	4
1.3. Algebraic varieties	7
1.4. Stalks and tangent spaces	10
1.5. Vector fields and bundles	12
1.6. Holomorphic functions on complex manifolds	14
Chapter 2. Basic Sheaf Theory	17
2.1. The Category of Sheaves	17
2.2. Exact Sequences	19
2.3. Direct and Inverse images	21
2.4. The notion of a scheme	22
2.5. Gluing schemes and toric varieties	24
2.6. Sheaves of Modules	26
2.7. Differentials	28
Chapter 3. Sheaf Cohomology	31
3.1. Flaque Sheaves	31
3.2. Cohomology	32
3.3. Soft sheaves	35
3.4. C^∞ -modules are soft	37
3.5. Mayer-Vietoris sequence	38
Chapter 4. De Rham cohomology	41
4.1. Acyclic Resolutions	41
4.2. De Rham's theorem	43
4.3. Poincaré duality	45
4.4. Gysin maps	48
4.5. Fundamental class	50
4.6. Lefschetz trace formula	52
Chapter 5. Riemann Surfaces	55
5.1. Topological Classification	55
5.2. Examples	57
5.3. The $\bar{\partial}$ -Poincaré lemma	60
5.4. $\bar{\partial}$ -cohomology	61
5.5. Automorphisms	63
5.6. Projective embeddings	64

5.7. Automorphic forms	67
Chapter 6. Simplicial Methods	71
6.1. Simplicial and Singular Cohomology	71
6.2. $H^*(\mathbb{P}^n, \mathbb{Z})$	75
6.3. Čech cohomology	76
6.4. Čech versus sheaf cohomology	78
6.5. First Chern class	80
Part 2. Hodge Theory	85
Chapter 7. The Hodge theorem for Riemannian manifolds	87
7.1. Hodge theory on a simplicial complex	87
7.2. Harmonic forms	88
7.3. The Heat Equation	91
Chapter 8. Toward Hodge theory for Complex Manifolds	97
8.1. Riemann Surfaces Revisited	97
8.2. Dolbeault's theorem	98
8.3. Complex Tori	100
Chapter 9. Kähler manifolds	103
9.1. Kähler metrics	103
9.2. The Hodge decomposition	105
9.3. Picard groups	107
Chapter 10. Homological methods in Hodge theory	109
10.1. Pure Hodge structures	109
10.2. Canonical Hodge Decomposition	110
10.3. Hodge decomposition for Moishezon manifolds	114
10.4. Hypercohomology	115
10.5. Holomorphic de Rham complex	117
Chapter 11. A little algebraic surface theory	119
11.1. Examples	119
11.2. The Neron-Severi group	122
11.3. The Hodge index theorem	124
11.4. Fibered surfaces	125
Chapter 12. Topology of families	127
12.1. Fiber bundles	127
12.2. Monodromy of families of elliptic curves	127
12.3. Local systems	131
12.4. Higher direct images	132
12.5. Estimate of first Betti number	134
Chapter 13. The Hard Lefschetz Theorem	137
13.1. Hard Lefschetz and its consequences	137
13.2. More identities	138
13.3. Lefschetz pencils	140
13.4. Barth's theorem	144

13.5. Hodge conjecture	145
13.6. Degeneration of Leray	146
13.7. Higher Chern classes	148
Part 3. Algebraic Methods	151
Chapter 14. Coherent sheaves on Projective Space	153
14.1. Cohomology of line bundles on \mathbb{P}^n	153
14.2. Coherence	155
14.3. Coherent Sheaves on \mathbb{P}^n	157
14.4. Cohomology of coherent sheaves	160
14.5. GAGA	162
Chapter 15. Computation of some Hodge numbers	167
15.1. Hodge numbers of \mathbb{P}^n	167
15.2. Hodge numbers of a hypersurface	169
15.3. Hodge numbers of a hypersurface II	170
15.4. Machine computations	171
Chapter 16. Deformation invariance of Hodge numbers	173
16.1. Families of varieties via schemes	173
16.2. Semicontinuity of coherent cohomology	175
16.3. Proof of the semicontinuity theorem	177
16.4. Deformation invariance of Hodge numbers	178
Part 4. Advanced Topics	181
Chapter 17. Additive invariants	183
17.1. Additive invariants	183
17.2. Mixed Euler characteristics	184
Chapter 18. Mixed Hodge Structures	187
18.1. Resolution of singularities and factorization	187
18.2. Mixed Hodge structures	188
18.3. Mixed Hodge numbers	189
18.4. Bittner's theorem	191
18.5. Complement of a smooth hypersurface	193
18.6. Griffiths' Residue	195
Chapter 19. Arithmetic of varieties	197
19.1. The Deligne-Weil bound	197
19.2. A transcendental analogue of Weil's conjecture	199
Chapter 20. The Hodge conjecture for simple examples	201
20.1. Cellular varieties	201
20.2. Uniruled fourfolds	202
20.3. Rationally connected fivefolds	204
Bibliography	207
