iLrn Tips for Lessons 20, 21, and 22

Lesson 20

#3  (c) Do not have to rationalize denominator.
    (d) Do not have to simplify (should be ok if you do).

#4  (d) put in numbers only, separated by commas.

Lesson 21

#1 (a) and (c) – must enter as ordered pairs (x,y)

#3  do not include f(x)= in the answer. Only include the mx+b part.

#4  (a) Do not include y= in the answer.
    (b) do not include C(x)= in the answer.

#5  Enter d= in the answer. Also, simplify the function a little.

Lesson 22

No comments on this lesson. Just a hint on #2—if you have to multiply and add/subtract to one of the coordinates…remember to always multiply before you add/subtract (order of operations).
