

iLrn Hints for Lesson 33 and 34

You can always view correct answers on iLrn after you end an assignment by clicking on “view details” to any problem. This will help you judge if your math is incorrect. If you get back into the assignment, you should have a different version of that problem.

You can always submit inputting questions to the discussion board linked from: www.math.purdue.edu/MA_153

Be specific with your question. Kristin is live on the board MWF nights from 8-10pm (no questions answered after 10pm on the night the lesson is due) and will answer also at other times ASAP.

Students complain that iLrn will not accept their answer, but it is almost always the math that is wrong so iLrn is working correctly.

Remember that we drop 4 online assignments at the end of the semester.

Lesson 33:

#1 There is no need to convert your units. Your answer will be in feet/minute, but you will only enter the numbers.

Lesson 34:

Do not include $f^{-1}(x) =$ with any answer.

#4 Math hint: Since you must take the square root of both sides of the equation to solve the inverse for y, you must decide upon the positive root or negative root to use. Your instructor will show an example during class.
