

iLrn Hints for Lesson 35

You can always view correct answers on iLrn after you end an assignment by clicking on “view details” to any problem. This will help you judge if your math is incorrect. If you get back into the assignment, you should have a different version of that problem.

You can always submit inputting questions to the discussion board linked from: www.math.purdue.edu/MA_153

Be specific with your question. Kristin is live on the board MWF nights from 8-10pm (no questions answered after 10pm on the night the lesson is due) and will answer also at other times ASAP.

Students complain that iLrn will not accept their answer, but it is almost always the math that is wrong so iLrn is working correctly.

Remember that we drop 4 online assignments at the end of the semester.

Lesson 35:

#1 Do not include $x=$ with the answer.

#3 Need all answers correct for a right response. Do not need to put \$ with any answer. Remember to round to the nearest cent. The wording “find the principal after each period” means to find the ending balance after the time period requested.

Math hint: Put everything into your calculator without rounding values off before your final answer. If you start rounding parts, your final answer will be way off by the time you are done.

#4 and #5 Do not need \$ with any answer. Math hint: Put everything into your calculator without rounding values off before your final answer. If you start rounding parts, your final answer will be way off by the time you are done.

#6 Do not include $x=$

Have a great Thanksgiving break for the rest of the week!!
