

## MA 231/232 Calculator Policy

A ONE-LINE scientific calculator is REQUIRED. Recommended is the TI-30Xa. You may use a TWO-LINE calculator as well so long as it does NOT have graphing abilities and can not perform differentiation and integration. If in doubt, please double check with your instructor. Graphing calculators are NOT allowed. You are allowed to use but NOT to share the approved calculators on quizzes and exams.

A one-line display shows what you type in and the answer on the same line. A simple check is to type in “2 + 2” and then hit “=”. The only thing you should see is the number 4.
