

MA222 Review for Exam #3

Hoffman Sections, Spring 2012

Below are thoughts and exercises pertaining to the third exam:

- I. The exam will be Monday, April 2nd, 2012, in our usual room during usual class time.
- II. You will have exactly 50 minutes to complete the exam.
- III. You may only use a one-line scientific calculator (no multiline or graphing ones).
- IV. Be able to confidently answer any question similar to the homework and realize that some questions will go a little beyond the homework to check for a deeper understanding.
- V. From the Chapter 10 review problems (page 398), consider numbers 23 and 26.
- VI. From Chapter 11 review problems (page 424), look at 2, 3, 7, 9, 11, 16, 17, and 21.
- VII. From Chapter 12 (page 450) try numbers 2, 4, 6, 8, and 12.
- VIII. If you want copies of any quizzes or quiz solutions, you may send me an email for the pdf. Note, however, that the exam will be of higher difficulty than the quizzes in many cases.
