Recommendations for Completing Homework

1. Complete all homework on paper first, before entering answers in WebAssign. If you are unable to correctly answer a particular problem, bring your work to your instructor's office hours, the Math Help Room, or another help resource to show what you have tried. Be organized, include every step and show all your work, just like you would on a quiz. You should attempt every problem on a particular homework assignment before seeking assistance.
2. Enter answer(s) into WebAssign and click Submit Answer or Save Progress
3. If a problem requires multiple attempts to reach the correct answer, mark the problem so you can go back and work on it again. Don't be fooled by your score; a 100% doesn't mean you understand 100% of the material from a particular assignment.
4. If it takes you multiple attempts to answer a problem correctly on WebAssign, you should find the corresponding book problem and try it for extra practice. There are two ways to find your WebAssign problems in the textbook. One option is to use the code on the right hand-side of each problem, for instance ***SwokATClassic12 1.1.002. [1480327]***; this code tells you the section (***1.1***) and problem (#2) from the textbook. The other option is to use the Assignment Sheet which is posted on the course website. If you are having trouble with problem #7 from the Lesson 3 assignment, simply go to the Assignment Sheet, find Lesson 3, and find the 7th problem in the list (#23 from page 39).

Keep in mind that receiving a 100% (or more) on a homework assignment does not necessarily mean that you understand 100% of the topics from that assignment or that you are 100% prepared for the exams. If you require multiple attempts to complete any homework problems, you need to be sure to go back and review those topics. You will not receive multiple attempts on quizzes or exams.
