Use these base ten pieces that indicate 1.36 to show the use of the sharing method to complete the problem  $1.36 \div 4$ . Clearly show any decomposing that is necessary.

Number answer: \_\_\_\_\_

#### 3.6

A student showed the following work for the problem  $280 \div 35$ : Use this same method to do the problem  $270 \div 45$ .

> 280 <u>-70</u> 210 <u>-70</u> 140 <u>-70</u> 70 <u>-70</u> 0

So four 70s is eight 35s.

#### 3.7

In each pair, choose the larger, using number sense rather than calculating.

543-182, or 543-185

543-182, or 547-182

Use drawings of base pieces to illustrate these problems. Specify which piece is used to represent one whole.

2.67 + 19.8

2.67 + 1.98

#### 5.1

5.2

Using the bar, draw a strip diagram to represent 21 is 35% of some number, N. Do not find or write the value of N. Put enough detail in your diagram so that a young student could easily determine the value of N.

Show your thinking to estimate:

a) 23% of 87,922

b) the sale price of a chair originally priced \$151.33 with a "20% off" tag

Describe a possible referent for each of the following:

10 miles

100 miles

1000 miles

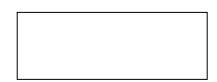

### 5.4

Rewrite this problem in scientific notation; multiply using scientific notation format; and write your answer in scientific notation.

 $230{,}000 \times 0{.}00000081$ 

Answer: \_\_\_\_\_

Shown below is  $1\frac{3}{4}$  yards of carpet. Draw pictures to represent 1 yard of carpet and  $2\frac{1}{3}$  yards of carpet, respectively. If the piece of carpet shown sells for \$31.50, what is the cost of the carpet per yard?

1 yard:

 $2\frac{1}{3}$  yards:

Cost of 1 yard of carpet: \_\_\_\_\_

### 6.2

Circle the larger number in each pair. Give a brief explanation of your thinking.

a) 
$$\frac{123}{240}$$
 and  $\frac{35}{70}$ 

b) 
$$\frac{91}{120}$$
 and  $\frac{59}{80}$ 

c) 
$$\frac{25}{101}$$
 and  $\frac{40}{159}$ 

## 6.3

Change each decimal to its simplified fraction equivalent. Show all steps of your work.
