Recommendations for Completing Homework

1. For each topic, read through the content, watch the videos (be sure to solve the examples that are being explained, pausing the videos if necessary to keep up with the examples), then use the green forward arrow in the upper left hand corner of the screen to proceed to the homework assignment for that topic.

2. Complete all homework on paper first, before entering answers in LON-CAPA. If you are unable to correctly answer a particular problem, go back and review the content and/or videos first before seeking assistance from someone else. Keep in mind you will not have the option of asking for help during exams, so try not to get into the habit on the homework.

3. If you are unable to answer a particular problem even after reviewing the content and videos for that topic, bring your work to your instructor’s office hours, the Math Help Room, or another help resource to show what you have tried. Be organized, include every step and show all your work so the person helping you can see what you’ve already done. You should attempt every problem on a particular homework assignment before seeking assistance.

4. Enter answer(s) into LON-CAPA and click Submit Answer.

5. If a problem requires multiple attempts to reach the correct answer, mark the problem so you can go back and work on it again.

Don’t be fooled by your score; a 100% doesn’t mean you understand 100% of the topics from that assignment or that you are 100% prepared for the exams. If you require multiple attempts to complete any homework problems, or if you receive help in anyway in order to complete any homework problems, you need to be sure to go back and review those topics. You will not receive multiple attempts on quizzes or exams.
