

## Finding Limits Numerically

The *limit* of a function is the value a function approaches as  $x$  approaches a particular value. If  $f(x)$  approaches  $L$  as  $x$  approaches  $c$ , we say the limit of  $f(x)$  as  $x$  approaches  $c$  is  $L$ , and we write  $\lim_{x \rightarrow c} f(x) = L$ . Think: As the  $x$ -values get closer to  $c$ , the  $y$ -values ( $y = f(x)$ ) get closer to  $L$ .

Example 1: If  $f(x) = x$  and  $c = 3$ , find  $\lim_{x \rightarrow 3} f(x)$ .

$$\lim_{x \rightarrow 3} x = 3$$

## Limits Come in Four Flavors

1.  $L$ : a finite value
2.  $\infty$ : The function gets bigger and bigger as  $x$  approaches  $c$ .
3.  $-\infty$ : The function gets smaller and smaller as  $x$  approaches  $c$ .
4. Does Not Exist (DNE): The function doesn't approach a specific value as  $x$  approaches  $c$ .

We can estimate the limit of a function by evaluating the function at numbers close to  $c$ .

Example 2: Find the following limit numerically.

$$\lim_{x \rightarrow 0} \frac{6x}{x^2 + 3x} = 2$$

$x$	-0.01	-0.001	-0.0001	0	0.0001	0.001	0.01
$f(x)$	2.0067	2.0007	2.0001	-	1.9999	1.9993	1.9934

Notice that  $f(x)$  need not be defined at the point  $c$  in order to find the limit!

Example 3: Find the following limit numerically.

$$\lim_{x \rightarrow -3} \frac{7}{(x+3)^2} = \infty$$

$x$	-3.01	-3.001	-3.0001	-3	-2.9999	-2.999	-2.99
$f(x)$	70,000	7,000,000	700,000,000	-	700,000,000	7,000,000	70,000

## One-Sided Limits

- Left-Sided Limit:  $\lim_{x \rightarrow c^-} f(x)$ ; Only look at values of  $x$  that are less than (to the left of)  $c$ .
- Right-Sided Limit:  $\lim_{x \rightarrow c^+} f(x)$ ; Only look at values of  $x$  that are greater than (to the right of)  $c$ .

Be careful to notice the difference between limits at negative numbers and left-sided limits.  $\lim_{x \rightarrow -c} f(x)$  is generally not the same as  $\lim_{x \rightarrow c^-} f(x)$ .

Example 4: Find the following limits numerically.

$$\lim_{x \rightarrow 2^-} \frac{3}{x-2} = -\infty \quad \lim_{x \rightarrow 2^+} \frac{3}{x-2} = \infty \quad \lim_{x \rightarrow 2} \frac{3}{x-2} = \text{DNE}$$

$x$	1.99	1.999	1.9999	2	2.0001	2.001	2.01
$f(x)$	-300	-3,000	-30,000	-	30,000	3,000	300

If you are only asked to find one of the one-sided limits, you only need to create the appropriate half of the chart.

Example 5: Find the following limits numerically.

$$\lim_{x \rightarrow 0^-} f(x) = 0 \quad \lim_{x \rightarrow 0^+} f(x) = 0 \quad \lim_{x \rightarrow 0} f(x) = 0$$

where

$$f(x) = \begin{cases} 3 \sin(x) & x < 0 \\ 2x & x \geq 0 \end{cases}$$

Make sure your calculator is in radians when working with trig functions in this course.

$x$	-0.01	-0.001	-0.0001	0	0.0001	0.001	0.01
$f(x)$	-0.0300	-0.0030	-0.0003	-	0.0002	0.002	0.02

## Fact

$\lim_{x \rightarrow c} f(x) = L$  if and only if  $\lim_{x \rightarrow c^-} f(x) = \lim_{x \rightarrow c^+} f(x) = L$ .

\* Here we allow  $L = \pm\infty$ .

## Finding Limits Graphically

We can also determine the limit of a function by looking at its graph.

Example 2 Revisited:

$$\lim_{x \rightarrow 0} \frac{6x}{x^2 + 3x} = 2$$

Example 3 Revisited:

$$\lim_{x \rightarrow -3} \frac{7}{(x+3)^2} = \infty$$

Example 4 Revisited:

$$\lim_{x \rightarrow 2} \frac{3}{x-2} = \text{DNE}$$

Example 6: Find the following limits and function values graphically.

$$\lim_{t \rightarrow 2^-} f(t) = 2$$

$$\lim_{t \rightarrow 2^+} f(t) = 0$$

$$\lim_{t \rightarrow 2} f(t) = \text{DNE}$$

$$f(2) = 1$$

$$\lim_{t \rightarrow 4^-} f(t) = 3$$

$$\lim_{t \rightarrow 4^+} f(t) = 3$$

$$\lim_{t \rightarrow 4} f(t) = 3$$

$$f(4) = 3$$

Example 7: Find the following limits and function values graphically.

$$\begin{array}{lll}
 \lim_{x \rightarrow -3^-} f(x) = -\infty & \lim_{x \rightarrow 2^-} f(x) = -\infty & \lim_{x \rightarrow 5^-} f(x) = \infty \\
 \lim_{x \rightarrow -3^+} f(x) = \infty & \lim_{x \rightarrow 2^+} f(x) = -\infty & \lim_{x \rightarrow 5^+} f(x) = \infty \\
 \lim_{x \rightarrow -3} f(x) = \text{DNE} & \lim_{x \rightarrow 2} f(x) = -\infty & \lim_{x \rightarrow 5} f(x) = \infty \\
 f(-3) = \text{Undefined} & f(2) = \text{Undefined} & f(5) = \text{Undefined}
 \end{array}$$

### DIY

1. Find the following limits and function values graphically.

$$\begin{array}{ll}
 \lim_{x \rightarrow -2^-} f(x) = 1 & \lim_{x \rightarrow 1^-} f(x) = 1 \\
 \lim_{x \rightarrow -2^+} f(x) = 1 & \lim_{x \rightarrow 1^+} f(x) = 2 \\
 \lim_{x \rightarrow -2} f(x) = 1 & \lim_{x \rightarrow 1} f(x) = \text{DNE} \\
 f(-2) = 1 & f(1) = -2
 \end{array}$$
