Lesson 6: Continuity

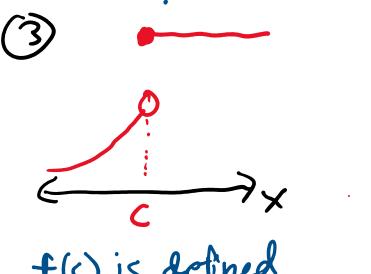

A function is continuous if there is no disruption in the graph.

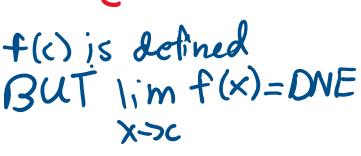

The following 4 graphs show f(x) is discontinuous @ x=C

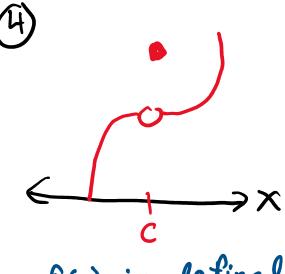

These 2 graphs have f(c) undefined.

f(c) is defined lim f(x) exists x>c RIIT I:mf(x) \pm f(c)

BUT limf(x) ×f(c)

We can see a function f(x) is continuous $0 \times -c$ if the following is true:

() f(c) is defined (i.e. it has a value

(2) lim f(x) exists

(3) Tim f(x) = f(c)

If any of these 3 conditions aren't met, then we say f(x) is discontinuous at x=c.

Ex 1: Discuss continuity of $f(x) = \frac{2x}{x^2 - x}$

When is f(x) undefined? (i.e. when is deno = 0)

X(X-I) = 0 $X_3 - X = 0$

x=0,1 -> We have discontinuities @ x=0,1 But what hind of discontinuity are they? Jump? Hole? VA?

C ^--/.

Let's simplify to answer that question

$$f(x) = \frac{2x}{x^2 - x} = \frac{2x}{x(x-1)} = \frac{2}{x-1}$$

B/c x canceled we have a hole @ X=0

what remains is VA => X=1 is VA.

What factor concels out? Hole What remains?

Ex 2: Discuss continuity of $f(x) = \begin{cases} e^{-x} & \text{if } x \leq 0 \\ \sqrt{x} - 1 & \text{if } x > 0 \end{cases}$

To determine confinuity, we need to check

the left and right Timits.

the left and right Timits.

$$\lim_{x\to 0^{-}} f(x) = \lim_{x\to 0^{-}} e^{-x} = e^{-x} = 1$$

$$\lim_{x\to 0^{-}} f(x) = \lim_{x\to 0^{-}} (x^{-1}) = 0 - 1 = -1$$

$$\lim_{x\to 0^{+}} f(x) = \lim_{x\to 0^{+}} (x^{-1}) = 0 - 1 = -1$$

$$\lim_{x\to 0^{+}} f(x) = \lim_{x\to 0^{+}} (x^{-1}) = 0 - 1 = -1$$

$$\lim_{x\to 0^{+}} f(x) = \lim_{x\to 0^{+}} (x^{-1}) = 0 - 1 = -1$$

Ex3: Discuss continuity of
$$f(x) = \begin{cases} 6x^2 + 9 & \text{if } x \leq 0 \\ 2x + 9 & \text{if } x \geq 1 \end{cases}$$

$$\begin{cases} 2x + 9 & \text{if } x \geq 1 \\ -2x - 2 & \text{if } x \geq 1 \end{cases}$$

We may have discontinuities @ x=0,1

$$6x^{2}+9 \quad 2x+9 \quad -2x-2$$
