MA 16010 LESSONS 15-16: RELATED RATES

This space is left for you to take your own notes. Related Rates are word problems that use implicit differentiation. We will be taking the derivative of equations with respect to

Recipe for Solving a Related Rates Problem

- Step 1: Draw a good picture. Label all constant values and give variable names to any changing quantities.
- Step 2: Determine what information you KNOW and what you WANT to find.
- **Step 3:** Find an equation relating the relevant variables. This usually involves a formula from geometry, similar triangles, the Pythagorean Theorem, or a formula from trigonometry. **Use your picture!**
- **Step 4:** Use implicit differentiation to differentiate the equation with respect to time t.
- **Step 5:** Substitute in what you **KNOW** from **Step 2** and any information that your equation in **Step 3** can give you and solve for the quantity you **WANT**. Do **NOT** substitute before this step!

Some Useful Formulas

Right Triangle	Triangle	Trapezoid
Pythagorean Theorem:	$A = \frac{1}{2}bh$	$A = \frac{1}{2}(a+b)h$
	$\frac{n-2^{m}}{2^{m}}$	$11-2(\alpha+b)n$
$a^2 + b^2 = c^2$	D . 1 .	
	P = a + b + c	
D 4 1 D	D 4 1	C' 1
Rectangular Box	Rectangle	Circle
V = lwh	A = lw	$A = \pi r^2$
S = 2(hl + lw + hw)	P = 2l + 2w	$C=2\pi r$
Right Circular Cylinder	<u>Sphere</u>	<u>Cone</u>
$V = \pi r^2 h$	$V = \frac{4}{3}\pi r^3$	$V = \frac{1}{3}\pi r^2 h$
	3	$v = \frac{1}{3}\pi r n$
$SA = 2\pi rh$	$S = 4\pi r^2$	
	5 – 111	$SA = \pi r l + \pi r^2$

Example 1: If x and y are both functions of t and $x + y^3 = 2$.

(a) Find
$$\frac{dy}{dt}$$
 when $\frac{dx}{dt} = -2$ and $y = 1$.

$$\frac{d}{dt}(x+y^{3}) = \frac{d}{dt}(2)$$

$$\frac{d}{dt}(x) + \frac{d}{dt}(y^{3}) = \frac{d}{dt}(2)$$

$$1 \cdot \frac{dx}{dt} + 3y^{2} \frac{dx}{dt} = 0$$

(b) Find
$$\frac{dx}{dt}$$
 when $\frac{dy}{dt} = 3$ and $x = 1$

$$\frac{dx}{dt} + 3y^{2} \frac{dy}{dt} = 0$$

$$\frac{dx}{dt} + 3y^{2} \cdot 3 = 0$$

$$\frac{dx}{dt} + 43y^{2} \cdot 3 = 0$$

$$x+y^3=2$$

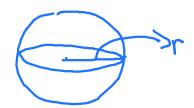

$$1-1y^3=2$$

$$y^3=1$$

$$y=1$$

Example 2: A spherical balloon is being deflated at a constant rate of 20 cubic cm per second. How fast is the radius of the balloon changing at the instant when the balloon's radius is 12 cm?

Step 1: Draw a picture. Label all constant values and give variable names to any changing quantities.

Step 2: Determine what information you KNOW and what you WANT to find.

KNOW:
$$\frac{dV}{dt} = -20 \frac{cm^3}{5}$$
 WANT: $\frac{dr}{dt}\Big|_{r=12}$

Step 3: Find an equation relating the relevant variables.

Step 4: Use implicit differentiation to differentiate the equation with respect to time t.

Step 5: Substitute in what you KNOW from Step 2 and any information that your equation in Step 3 can give you and solve for the quantity you WANT.

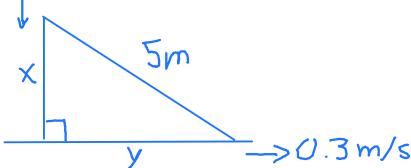

$$-20 = 4\pi(12)^{2} \frac{dr}{dr}$$

$$-17(12)^{2} \frac{dr}{dr}$$

$$-5 \frac{dr}{(12)^{2}\pi} = \frac{dr}{dr} = \frac{5}{121\pi}$$

Example 3: A ladder 5 meters long rests on horizontal ground and leans against a vertical wall. The foot of the ladder is pulled away from the wall at the rate of 0.3 m/sec. How fast is the top sliding down the wall when the foot of the ladder is 3 m from the wall?

Step 1: Draw a picture. Label all constant values and give variable names to any changing quantities.

Step 2: Determine what information you KNOW and what you WANT to find.

KNOW:
$$\frac{dy}{dt} = 0.3 \text{ M}$$

WANT:
$$\frac{dx}{d+}|_{y=3}$$

Step 3: Find an equation relating the relevant variables.

$$\chi^{2} + y^{2} = 5^{2} = 25$$

Step 4: Use implicit differentiation to differentiate the equation with respect to time t.

$$\frac{d}{dt} \left(x^2 + y^2 \right) = \frac{d}{dt} \left(25 \right)$$

$$2x \frac{dx}{dt} + 2y \frac{dy}{dt} = 0$$

$$2x \frac{dx}{dt} = -2y \frac{dy}{dt}$$

$$\frac{2}{2} \frac{dx}{dx} = -\frac{2}{2} \frac{dy}{dx}$$

$$\frac{dx}{dx} = -\frac{2}{2} \frac{dy}{dx}$$

$$\frac{dx}{dx} = -\frac{2}{2} \frac{dy}{dx}$$

Step 5: Substitute in what you KNOW from Step 2 and any information that your equation in Step 3 can give you and solve for the quantity you WANT.

$$\frac{dx}{dt} = -\frac{3}{x} \cdot 0.3 = -0.9 \\ \frac{dx}{dt} = -0.9 = -0.225$$

Find x by plugging
y=3 into

$$x^{2}+y^{2}=25$$

 $x^{2}+3^{2}=25$
 $x^{2}=25-9=16$
 $x=4$

(1) How fast is the plane's d	irectly away from you at 500 mph at an altitude of 3 miles. Istance from you increasing at the moment when the plane is ground 4 miles from you?
Step 1: Draw a picture. Labe	el all constant values and give variable names to any changing quantities.
Step 2: Determine what infor	rmation you KNOW and what you WANT to find.
KNOW:	WANT:
Step 3: Find an equation rela	ating the relevant variables.
Step 4: Use implicit differen	tiation to differentiate the equation with respect to time <i>t</i> .
	u KNOW from Step 2 and any information that your equation in Step 3 e for the quantity you WANT.

tion changing when it is $\pi/3$? constant values and give variable names to any changing quan	itities
n you KNOW and what you WANT to find.	
WANT:	
he relevant variables.	
n to differentiate the equation with respect to time <i>t</i> .	
OW from Step 2 and any information that your equation in St the quantity you WANT.	ер 3
e c	onstant values and give variable names to any changing quant by you KNOW and what you WANT to find. WANT: The relevant variables. The differentiate the equation with respect to time t.

	It does the water level in the tank drop when the water is the formula right circular cylinder is $V = \pi r^2 h$.
Step 1: Draw a picture. Label all con	nstant values and give variable names to any changing quantities.
Step 2: Determine what information	you KNOW and what you WANT to find.
KNOW:	WANT:
Step 3: Find an equation relating the	e relevant variables.
Step 4: Use implicit differentiation t	to differentiate the equation with respect to time t .
Step 5: Substitute in what you KNO	W from Step 2 and any information that your equation in Step 3

	square 90 ft on a side. A player runs from first base to the is the player's distance from home base increasing when ase?
Step 1: Draw a picture. Label all	constant values and give variable names to any changing quantities.
Step 2: Determine what information KNOW:	on you KNOW and what you WANT to find. WANT:
Step 3: Find an equation relating	the relevant variables.
Step 4: Use implicit differentiation	on to differentiate the equation with respect to time <i>t</i> .
Step 5: Substitute in what you KN can give you and solve for	NOW from Step 2 and any information that your equation in Step 3 the quantity you WANT.
