

Assignment for October 3

- Get Lusine information by Monday at Noon.
- Lusine will take information provided tonight and use it to “correct” data where appropriate. She will then send the split data sets to the other TA’s who will distribute to each group.
- Each group will then rerun the R code developed for this week for the data visualization process against the corrected data. Come ready to discuss on Thursday.
- I will forward the documentation that was created by each group on the data analysis procedures and findings to Group 6. Group 6 will be responsible for bringing together into one documentation from each group. Kyle will be the leader in the process and be responsible for having it to me by Noon on October 2.
