Assignment for September 12

- Review the Data in Exercise 3. Identify the errors and recommend a way to fix each error. Prepare a short report as a group and turn it into your TA prior to class on September 12. You may make one submission per group. Your first submission will be the only one counted.

- As a group, brainstorm this question – If I had a file with 700,000 records, how would I find the errors. Write down your groups thoughts and we will discuss on September 12.

- We will have a quiz on September 12 on Data Validation and Data Cleansing.
