

## Assignment for September 19

- Read Actuarial Standard of Practice 23 (ASOP 23). We will discuss it in class on September 19.
- Review the OneAmerica data. Identify any errors and recommend a way to fix each error. Make sure that your review of OneAmerica data complies with the requirements of the ASOP. Come to class ready to discuss.
- Using R:
  - Calculate the average issue age.
  - Calculate the weighted average issue age using the specified amounts as weights.
  - Calculate the average specified amount.
  - Calculate the average specified amount by year of issue. In other words, what is the average specified amount for policies issued in 1932? In 1933? Etc.
- Turn the answers to the above questions and the R code into your TA prior to the start of class on September 19.
