

CONTENTS

Lecture 1.	Basic notions (AS)	1
Lecture 2.	Sheaves: a potpourri of algebra, analysis and topology (UW)	10
Lecture 3.	Resolutions and Derived functors (GL)	23
Lecture 4.	Dimension theory, Gröbner bases (AL)	28
Lecture 5.	Complexes from a sequence of ring elements (GL)	36
Lecture 6.	Local cohomology - the basics (SI)	45
Lecture 7.	Hilbert Syzygy Theorem and Auslander-Buchsbaum Theorem (GL)	52
Lecture 8.	Depth and cohomological dimension (SI)	56
Lecture 9.	Cohen-Macaulay rings (AS)	60
Lecture 10.	Gorenstein Rings (CM)	69
Lecture 11.	Number of equations and (non)vanishing of local cohomology (UW)	81
Lecture 12.	Connections with sheaf cohomology (GL)	88
Lecture 13.	Graded modules and sheaves on the projective space (AL)	96
Lecture 14.	The Hartshorne-Lichtenbaum Vanishing Theorem (CM)	101
Lecture 15.	Connectedness of algebraic varieties (SI)	106
Lecture 16.	Polyhedral applications (EM)	109
Lecture 17.	Computational D-module theory (AL)	118
Lecture 18.	Global duality (SI)	123
Lecture 19.	De Rham cohomology and local cohomology (UW)	129
Lecture 20.	Local cohomology over semigroup rings (EM)	145
Lecture 21.	The Frobenius Endomorphism (CM)	156
Lecture 22.	Some curious examples (AS)	164
Lecture 23.	Computing localizations and local cohomology using D -modules (AL)	172
Lecture 24.	Holonomic ranks in families of hypergeometric systems (EM)	178
Appendix A.	Injective Modules and Matlis Duality	186
